

FLIGHTMAP 7.2 Release

FLIGHTMAP 7.2 is the next minor release of FLIGHTMAP. It offers a new Balance chart, performance improvements, as well as a number of minor other improvements and bug fixes.

Feature	Description
Balance	<p>The Balance, as was available in FLIGHTMAP 6, has been rebuilt on the new FLIGHTMAP 7 platform. This has not only improved the performance of the chart, but also led to new functionalities:</p> <ul style="list-style-type: none"> • For more intuitive use, the Balance functionalities 'Group by' and 'Stack by' are now presented as separate options. This gives the possibility for more combinations of both options. • Stack by all project classifications. Where in the previous Balance, the stack function only possible was for the default stack or the project name, it is possible in the new released Balance chart to stack on all project classifications (e.g. portfolio, current stage, project type) • As a result from customer feedback, the sorting functionality has been improved: items can be sorted on size or on a fixed order.

Illustration: Balance as bar and pie chart

Other improvements

- Filter text as choice: for classification based on free text input, projects can be filtered on the unique inputs
- The compositions in which a project is included can be shown on project data pages and in the project list
- Performance of charts, data pages and Excel connector
