## FLIGHTMAP 8.5 Release

FLIGHTMAP 8.5 is the next minor release of FLIGHTMAP. It focuses on new features in project version management and reporting.

| *Feature* | *Description* |
| --- | --- |
| **New version management via portfolio over time** | The history of projects often proves to be a valuable source of information for the further planning of a project. To use this information, it's possible to create versions over the lifetime of a project. When a version has been created, a snapshot of all the project information at that moment is saved to access it later.<br><br>The previous release of FLIGHTMAP has made it possible to retrieve the versions of multiple projects at once using project list. Upon user request, retrieving versions has also been added to the portfolio over time chart. Versions can be retrieved for either a selected date or a project state. When selected, version data for all projects is shown. The information of an individual project can be shown by hovering over an project in the graph; showing the exact value, the state and the date of the version. |

| --- | --- |
| **Improved Power BI connection** | Even though FLIGHTMAP already features very extensive dashboarding capabilities, a connection to Microsoft Power BI has been added in the last release to use the information available in FLIGHTMAP in other (company-wide) dashboards.<br><br>After using the connection for some time, improvements were identified and implemented:<br>• The performance of a data sync has been improved. By preparing the data in the background, a full sync can now be done in a couple of seconds. |

- New compositions in Flightmap are automatically added to the Power BI dashboards
- By the implementation of a new authorization method, it's now even more secure to add Flightmap data to existing dashboards.

Please contact FLIGHTMAP support for more information to start using the Power BI connection.

**Use of filters in reports**

In this new release of Flightmap, the report configurator has been improved for better portfolio and filter selection in reports. This makes it possible to create a single report with multiple graphs via the 'Add to report' in the charts, each with a different portfolio and filter combination.

**Other improvements**

- Responsiveness of the main menu has been improved for faster navigation
- Tabs on the data pages can now show capital letters for improved readability
- Various performance improvements for charts and calculations
