

### FLIGHTMAP 8.6 Release

FLIGHTMAP 8.5 is the next minor release of FLIGHTMAP. It focuses on a new way of configuring charts and lists.

Feature	Description
<b>New configuration panel for charts and lists</b>	A new configuration panel has been added for easier configuration of charts and grids. The new panel opens in front of the charts and lists in the center of the screen, depending on the selected chart. It can be moved over the screen to see the chart that is being edited and create more space to easier edit the settings of the chart.

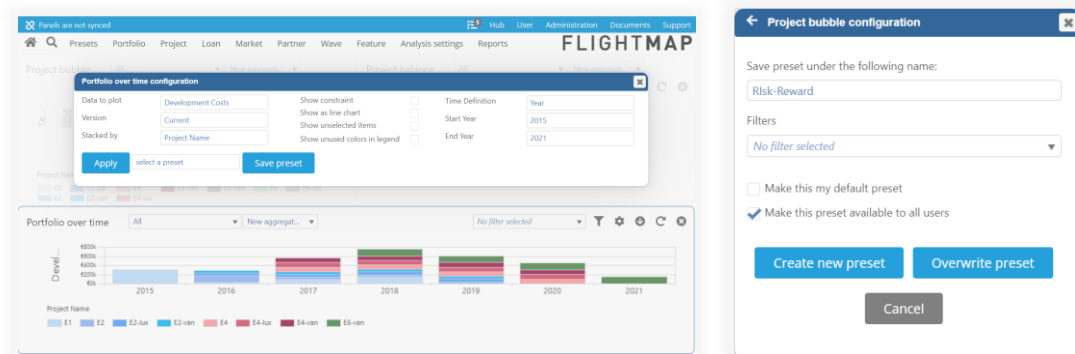

Figure: new configuration panel (left) and choice between new or overwriting presets

### Improved saving of presets

Presets are the core of executing portfolio management with Flightmap. Presets give quick access to relevant charts, lists and dashboards. The set of presets in a portal are continuously being improved. To make this even easier, there is now a clear distinction between creating new presets or overwriting a current preset.

### Other improvements

- Various performance improvements for charts and calculations
