

The major change in Flightmap 11.1 is the newly implemented task list.

Task list

The Task list has been rebuilt which results in a faster and smoother working list. Tasks will be shown in a collapsed mode and can be expanded by clicking on the header. In the header the task-title, the project name and the task-owner are shown. New tasks created by the workflow are automatically added to the active task list.

Task list

New Tasklist

Other improvements

Next to the renewed tasklist, improvements have been made to:

- **Change overview:** values have been formatted correctly
- **Default page or dashboard:** An administrator can now determine which page or dashboard is the starting page for all users. This can be configured in the System settings, tab Defaults.
